QUICKENTRY FOR TALLY · OFFICE SETUP

Connect your TallyPrime in 30 minutes

A step-by-step guide for the office PC that runs TallyPrime.
Follow the pages in order and tick each box as you go.

How it works

Phone
Salesperson makes an invoice, even offline

→

Cloud
Keeps it safe until the office PC collects it

→

Office PC
Connector posts it into TallyPrime

Contents

1 Before you start
2 TallyPrime settings
3 Load the QuickEntry add-on
4 Ledgers and stock items
5 Install the office connector
6 Your first test entry
7 Check that everything is in Tally
8 Admin: ledger names, people

1 Before you start

You need the following:

- [ ] A Windows PC with **TallyPrime** installed and your company created. For testing, Educational mode is fine.
- [ ] An internet connection on that PC. Only outgoing internet is used, so no ports need to be opened.
- [ ] Your **Company ID** and the **connector key** from your QuickEntry provider.
- [ ] About 30 minutes, and Windows administrator rights on the PC.

> **Tip:** try everything on a **test company** first. Move to your real company once the test entry posts correctly.

2 TallyPrime settings

2.1 Turn on Tally's connection port

1. Open TallyPrime and load your company.
2. Press F1 Help › **Settings** › **Connectivity** › **Client/Server configuration**.
3. Set **TallyPrime acts as** to `Both` and **Port** to `9000`. Save with Ctrl + A.
4. Check it: on the same PC, open Chrome and go to `http://localhost:9000`. It should say *TallyPrime Server is Running*.

2.2 Company features

Press F11 (Company Features) and set these to **Yes**:

Feature	Why it is needed
Maintain Inventory	Invoices carry stock items with quantity and rate.
Enable VAT (Taxation)	VAT is posted to your Output VAT ledger.
Order processing (Inventory)	Only needed if salespeople take **Sales Orders**.

> **Educational mode:** Tally only lets you enter vouchers dated the 1st, 2nd or 31st of a month. Make test entries on one of those days.

3 Load the QuickEntry add-on (TDL)

The add-on adds two hidden fields to Tally. They let QuickEntry recognise each customer, item and voucher, so an entry is **never posted twice**.

3.1 Get the setup files from GitHub

1. On the Tally PC, download the setup package:
   `https://github.com/bibin9/TallyEntry/archive/refs/heads/main.zip`
2. Right-click the downloaded `TallyEntry-main.zip` › **Extract All** to a simple folder, for example `C:\QuickEntry`.
3. The add-on file is now at `C:\QuickEntry\TallyEntry-main\tdl\QuickEntry.tdl`.

3.2 Tell Tally to load it

1. Press F1 Help › **TDLs & Add-ons** › F4 **Manage Local TDLs**.
2. Set **Load selected TDL files on startup** to `Yes`.
3. In the list, type the **full path** from step 3.1 exactly. Save with Ctrl+A.
4. Close and reopen TallyPrime. Go back to **TDLs & Add-ons**. QuickEntry.tdl must show as **Loaded**.

3.3 What the file should contain

Open it in Notepad to check. The working part is just these three lines; everything starting with `;;` is a comment.

```
[System: UDF]
    QECode  : String : 30101
    QETxnID : String : 30102
```

> **Error T0008 "Could not find … Part: MST LED Basic Details"?** Tally is reading an **old copy** of the file. The number in brackets, such as (27), is the line number. Open the exact path shown in the error, delete everything below the three lines above, save, and restart Tally.

4 Ledgers and stock items

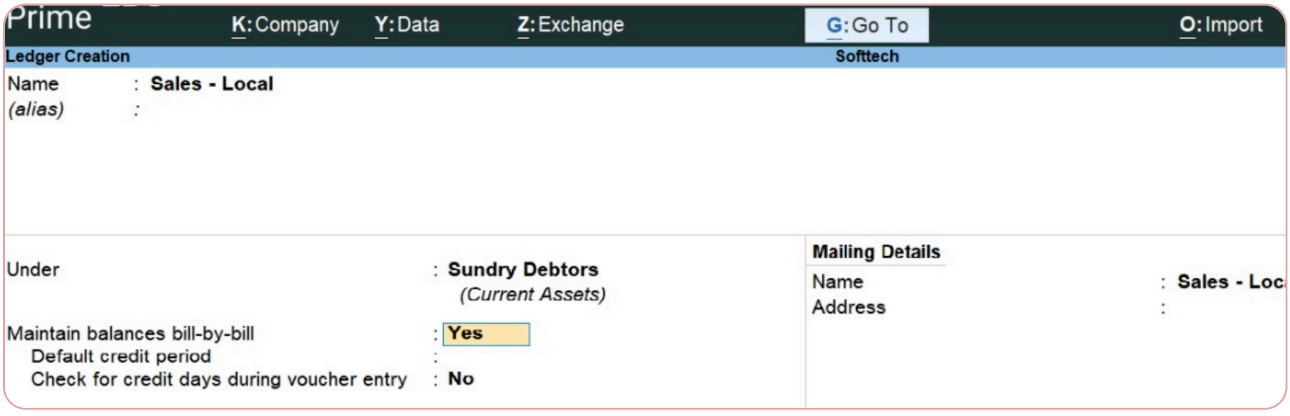

> **Use your existing ledgers.** You do **not** need to create or rename anything in Tally. QuickEntry posts into ledgers you already have. The office admin tells the app their names once, in **More › Tally ledger names** (page 8).

QuickEntry needs one ledger of each kind below. Check that each exists in your Tally and note its **exact name**.

Used for	Usual group in Tally	Example names
Sales	Sales Accounts	`Sales`, `Sales - Local`, `Sales @ 5%`
Purchases	Purchase Accounts	`Purchase`, `Purchase - Local`
Output VAT (on sales)	Duties & Taxes (VAT)	`Output VAT`, `VAT Output 5%`
Input VAT (on purchases)	Duties & Taxes (VAT)	`Input VAT`, `VAT Input 5%`
Round off	Indirect Expenses	`Round Off`, `Rounding`
Cash	Cash-in-Hand	`Cash`
Customers	**Sundry Debtors**	Picked up automatically and shown on the phones
Stock items	Any stock group	Picked up automatically, with unit and selling rate

Only if one is missing, create it: Gateway › Alt + C Create › **Ledger**. For Sales or Purchase ledgers, set Type of ledger to *Not Applicable*. Output and Input VAT must be **two separate** ledgers.

> **Common mistake:** a new Sales ledger created **under Sundry Debtors**, as below, becomes a customer. Change **Under** to **Sales Accounts**; the bill-by-bill question then disappears.

× Wrong: "Sales - Local" is under Sundry Debtors. It must be under Sales Accounts.

5 Install the office connector

The connector is a small background program. It collects entries from the cloud and posts them into Tally, and sends your customers and items up to the phones. It starts with Windows on its own.

1. Open the folder you extracted in step 3.1, then `TallyEntry-main\connector\windows`.
2. Right-click **install.cmd** › **Run as administrator**. Click Yes when Windows asks.
3. If Node.js is missing, type `Y` to install it automatically.
4. Answer the three questions:

Question	What to type
Company name exactly as shown in TallyPrime	The company name from the top of Tally's Gateway screen, with the same spelling and capitals
App address	`https://tallyentry.quickentry.workers.dev`
Paste the connector key	The key from your provider. It stays hidden while you paste, which is normal. Press Enter.

5. The installer finishes with **Connector is running**.

Check it any time

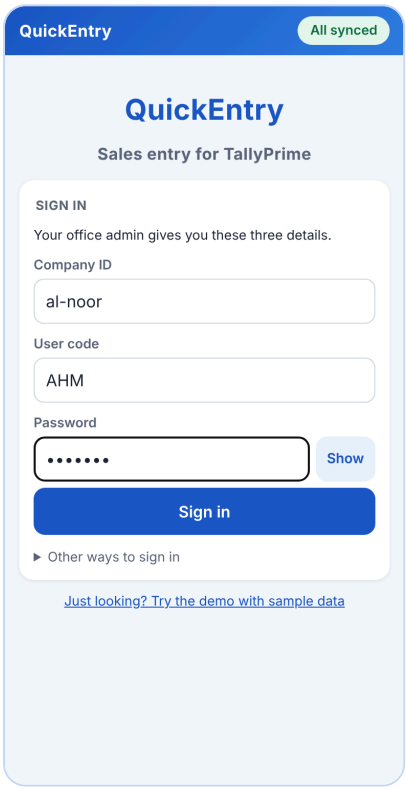

Double-click **check.cmd** in the same folder. It tests Tally and the cloud and shows *Background task: Running*, followed by the latest log lines.

> **Updating later:** download the zip again (step 3.1), extract it and run **install.cmd** again. Your key and answers are kept. Settings and the log are stored in `C:\ProgramData\QuickEntry`.

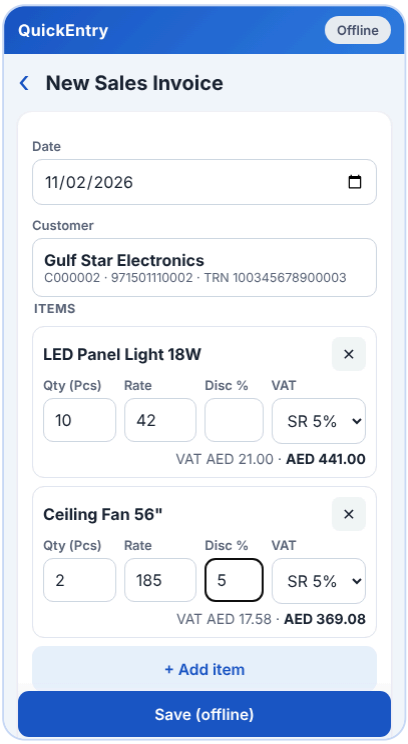

> **Keep TallyPrime open** with the company loaded during working hours. While Tally is closed, entries wait safely in the cloud and post as soon as Tally opens. Nothing is lost.

6 Your first test entry

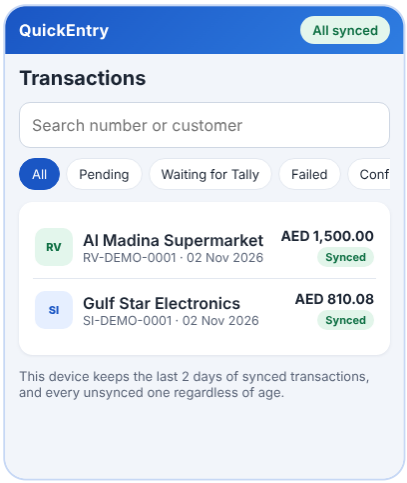

1. On a phone, open `https://tallyentry.quickentry.workers.dev`. Sign in with the **Company ID**, your **user code** and **password**.
2. On **Home**, tap **Sync now**. Within a minute, your Tally customers and items appear under **Customers**.
3. Tap **+** › **New Invoice**. Pick the customer, tap **+ Add item**, set quantity and rate, then tap **Save**.
4. Watch the status go from Pending to Waiting for Tally to Synced. This usually takes under a minute.

Sign in

New invoice

Synced

See it in Tally

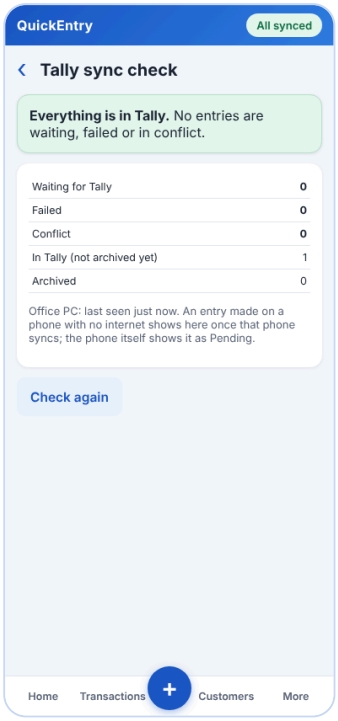

1. In TallyPrime: Alt + G Go To › **Day Book**.
2. **Day Book empty?** It only shows Tally's current date. Press F2 and type the invoice date, or press Alt + F2 and pick a period.
3. Open the voucher. Check the customer, item, quantity, rate, VAT and total.

7 Check that everything is in Tally

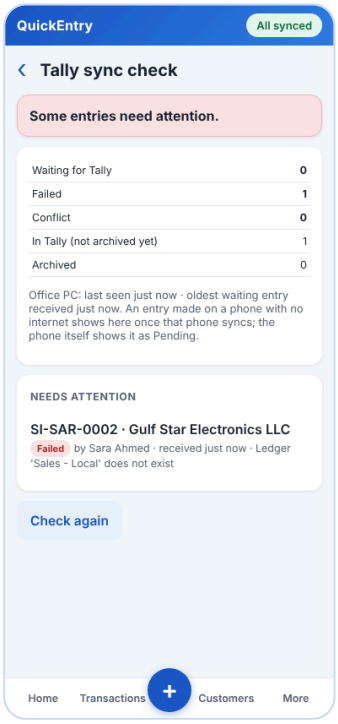

The office admin can confirm at any time that every phone entry reached Tally.

1. Sign in as the **admin** user.
2. Go to **More** › **Tally sync check**.
3. **Green, "Everything is in Tally":** you're done.
4. **Red:** the screen lists what needs attention. An entry marked Failed shows Tally's own reason, usually a ledger name that doesn't match. Fix it in Tally or in More › Tally ledger names, then edit and save the entry again.
5. "Office PC: last seen" shows when the connector last checked in. If it is more than a few minutes ago, the PC is off, offline, or the connector has stopped (see page 10).

> **Edits are safe:** when someone edits an invoice on the phone, the **same** Tally voucher is updated. A second copy is never created.

All good

Needs attention

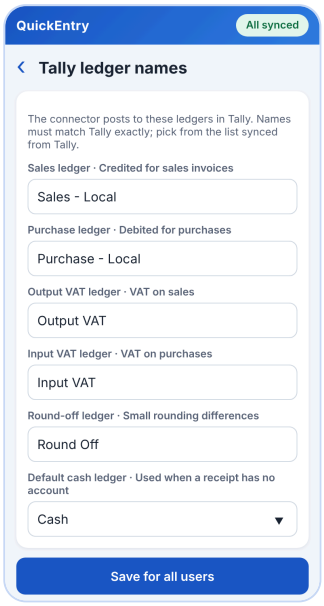

8 Office admin: ledger names and people

Sign in on a phone or PC with the **admin** user. All admin screens are under **More**, and every change reaches all users at their next sync.

8.1 Tally ledger names (do this first)

1. **More** › **Tally ledger names**.
2. For each box, tap and **pick your ledger from the list**. The list comes from your Tally, so the spelling is always right.
3. A red *Not found in the ledgers synced from Tally* under a box means the name doesn't match yet. Pick again from the list.
4. Tap **Save for all users**.

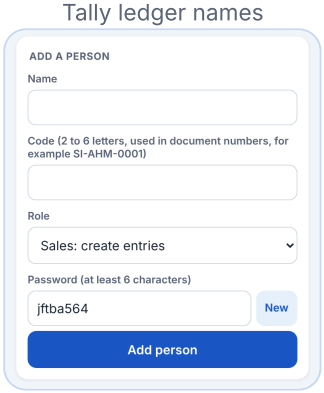

> **Changed a name later?** If an entry shows Failed because of a ledger name, fix the name here. Then open the entry, tap Edit and Save, and it is sent again.

Tally ledger names

8.2 Add a salesperson

1. **More** › **Users and passwords** › **Add a person**.
2. Enter the **Name** and a **Code** of 2 to 6 letters, for example `AHM`. The code appears in their document numbers, such as SI-AHM-0001.
3. Choose the **Role**: *Sales* creates entries; *Office admin* can also change settings and manage people.
4. Keep the suggested password or type one (at least 6 characters). Tap **Add person**.
5. The sign-in details are shown **once**: Company ID, user code and password. Tap **Send by WhatsApp** to send them to the person privately.

Add a person

9 Office admin: people, company and data

9.1 Managing people

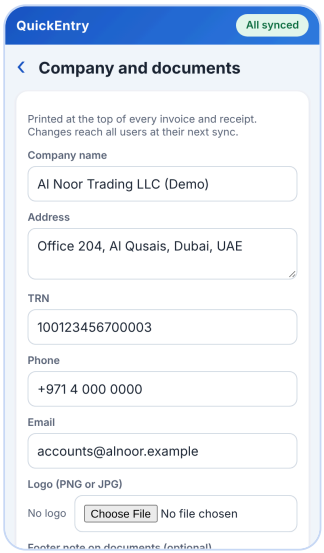

Button	When to use it
Set / Reset password	Someone forgot their password. They are signed out on every phone and sign in again with the new one. Entries already on their phone are kept.
New key	A phone was lost or stolen. All their old sign-ins stop working at once.
Switch off / on	Someone left or is on leave. They can't sign in until switched on again. Their past entries stay.
Make admin	Give a trusted person access to settings and people.

> **Locked out?** After 5 wrong passwords, sign-in is blocked for 15 minutes. The admin can reset the password to unlock it straight away.

9.2 Company and documents

More › **Company and documents**. Set what is printed on every invoice and receipt:

- [ ] Company name, address, **TRN**, phone and email
- [ ] Logo (PNG or JPG), and an optional footer note such as bank details
- [ ] **Salespeople may change item rates**: untick to lock rates to Tally's price
- [ ] **Receipt modes**: Cash, Cheque, PDC, Bank transfer, Card, one per line

Company and documents

9.3 VAT settings

More › **VAT settings**: currency (AED), VAT rates (Standard 5%, Zero-rated, Exempt), and whether rates include VAT.

9.4 How long data is kept (bottom of Company and documents)

Setting	Default
Keep synced entries on phones	2 days
Keep entries active on the server	7 days
Then keep them in the archive	30 days

Only entries already in Tally are archived or deleted; anything waiting or failed is **always kept**. Old entries: **More › Archive**.

10 If something goes wrong

What you see	What to do
"Invalid files folder" when opening Tally	A new install has no company yet. Close the message, press **Alt** + **K** › **Create** company. An empty `data` folder is normal.
Error T0008 in TDLs & Add-ons	Tally is loading an old QuickEntry.tdl. Open the path shown in the error, keep only the 3 lines from page 3, save, and restart Tally.
`localhost:9000` doesn't open	Tally is closed, or the port isn't on. Repeat step 2.1.
Customers or items don't appear on the phone	Run **check.cmd**. Make sure the company name the connector uses matches Tally exactly. Customers must be under **Sundry Debtors**. Tap **Sync now** on the phone.
Entry stuck on **Waiting for Tally**	Tally must be open with that company loaded. Check "Office PC: last seen" in Tally sync check, and run check.cmd.
Entry shows **Failed**	Open it on the phone to see Tally's reason, usually a ledger name that doesn't match. Fix it in More › Tally ledger names (page 8), then edit and save the entry to send it again.
Day Book looks empty	Press **F2** and change the date to the invoice date.
Tally PC replaced, or key leaked	Ask your provider for a **new connector key**. Then run `install.cmd -NewKey` from a Command Prompt opened as administrator.
Phone shows **Signed out**	The admin reset the password. Sign in again. Entries already on the phone are kept.
Remove the connector	Run `C:\Program Files\QuickEntry\uninstall.cmd`. Nothing in Tally is changed.

Still stuck? Send your provider a screenshot of the error, plus the output of **check.cmd**. The log file is `C:\ProgramData\QuickEntry\connector.log` .
