QUICKENTRY FOR TALLY · OFFICE SETUP

Connect your TallyPrime in 30 minutes

A step-by-step guide for the office PC that runs TallyPrime.
Follow the pages in order and tick each box as you go.

How it works

Phone
Salesperson makes an invoice, even offline

→

Cloud
Keeps it safe until the office PC collects it

→

Office PC
Connector posts it into TallyPrime

Contents

1 Before you start
2 TallyPrime settings
3 Load the QuickEntry add-on
4 Ledgers and stock items
5 Install the office connector
6 Your first test entry
7 Check that everything is in Tally
8 If something goes wrong

1 Before you start

You need the following:

- [ ] A Windows PC with **TallyPrime** installed and your company created. For testing, Educational mode is fine.
- [ ] An internet connection on that PC. Only outgoing internet is used, so no ports need to be opened.
- [ ] Your **Company ID** and the **connector key** from your QuickEntry provider.
- [ ] About 30 minutes, and Windows administrator rights on the PC.

> **Tip:** try everything on a **test company** first. Move to your real company once the test entry posts correctly.

2 TallyPrime settings

2.1 Turn on Tally's connection port

1. Open TallyPrime and load your company.
2. Press F1 Help › **Settings** › **Connectivity** › **Client/Server configuration**.
3. Set **TallyPrime acts as** to `Both` and **Port** to `9000`. Save with Ctrl + A.
4. Check it: on the same PC, open Chrome and go to `http://localhost:9000`. It should say *TallyPrime Server is Running*.

2.2 Company features

Press F11 (Company Features) and set these to **Yes**:

Feature	Why it is needed
Maintain Inventory	Invoices carry stock items with quantity and rate.
Enable VAT (Taxation)	VAT is posted to your Output VAT ledger.
Order processing (Inventory)	Only needed if salespeople take **Sales Orders**.

> **Educational mode:** Tally only lets you enter vouchers dated the 1st, 2nd or 31st of a month. Make test entries on one of those days.

3 Load the QuickEntry add-on (TDL)

The add-on adds two hidden fields to Tally. They let QuickEntry recognise each customer, item and voucher, so an entry is **never posted twice**.

3.1 Get the setup files from GitHub

1. On the Tally PC, download the setup package:
   `https://github.com/bibin9/TallyEntry/archive/refs/heads/main.zip`
2. Right-click the downloaded `TallyEntry-main.zip` › **Extract All** to a simple folder, for example `C:\QuickEntry`.
3. The add-on file is now at `C:\QuickEntry\TallyEntry-main\tdl\QuickEntry.tdl`.

3.2 Tell Tally to load it

1. Press F1 Help › **TDLs & Add-ons** › F4 **Manage Local TDLs**.
2. Set **Load selected TDL files on startup** to `Yes`.
3. In the list, type the **full path** from step 3.1 exactly. Save with Ctrl+A.
4. Close and reopen TallyPrime. Go back to **TDLs & Add-ons**. QuickEntry.tdl must show as **Loaded**.

3.3 What the file should contain

Open it in Notepad to check. The working part is just these three lines; everything starting with `;;` is a comment.

```
[System: UDF]
    QECode  : String : 30101
    QETxnID : String : 30102
```

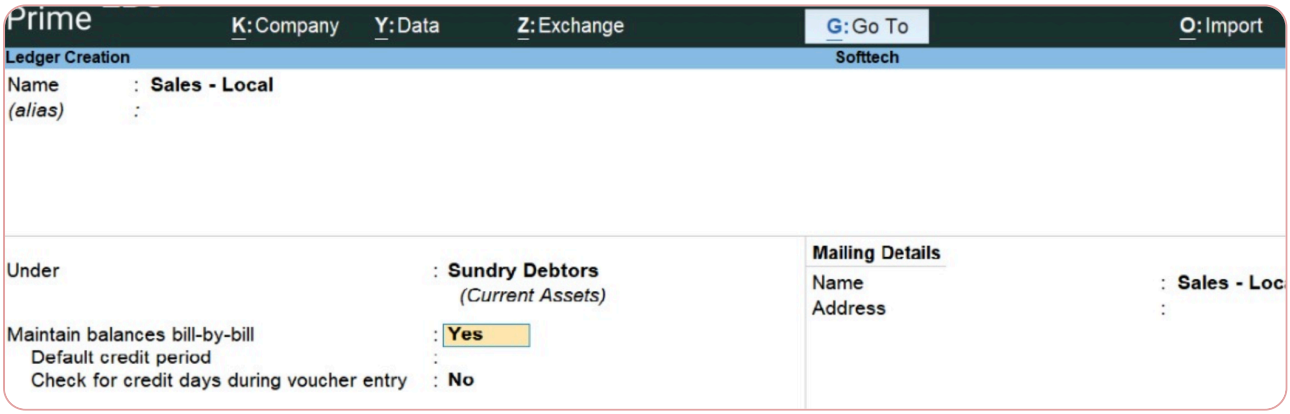

> **Error T0008 "Could not find … Part: MST LED Basic Details"?** Tally is reading an **old copy** of the file. The number in brackets, such as (27), is the line number. Open the exact path shown in the error, delete everything below the three lines above, save, and restart Tally.

4 Ledgers and stock items

QuickEntry posts into these ledgers. Create any that are missing: Gateway › Alt + C Create › **Ledger**. Names must match **exactly**, including spaces and the dash.

Ledger name	Under (group)	Other fields
`Sales - Local`	Sales Accounts	Type of ledger: Not Applicable
`Purchase - Local`	Purchase Accounts	Type of ledger: Not Applicable
`Output VAT`	Duties & Taxes	Type of duty/tax: VAT
`Input VAT`	Duties & Taxes	Type of duty/tax: VAT. Create it as a **separate** ledger.
`Round Off`	Indirect Expenses	None
`Cash`	Cash-in-Hand	Usually exists already
Your customers	**Sundry Debtors**	Phone, email and TRN appear on the phone

> **Common mistake:** the Sales ledger created **under Sundry Debtors**, as in the screenshot below. That turns it into a customer. Change **Under** to **Sales Accounts**; the bill-by-bill question then disappears.

× Wrong: "Sales - Local" is under Sundry Debtors. It must be under Sales Accounts.

Stock items

1. Create a unit first: Alt + C › **Unit**, symbol `Nos`.
2. Then Alt + C › **Stock Item**, for example *LED Bulb* with unit Nos. A selling rate is optional; staff can type the rate on the phone.

> **Different names in your Tally?** If your company already uses, say, "Sales" instead of "Sales - Local", you don't need new ledgers. The office admin sets the names in the app under **More › Tally ledger names**.

5 Install the office connector

The connector is a small background program. It collects entries from the cloud and posts them into Tally, and sends your customers and items up to the phones. It starts with Windows on its own.

1. Open the folder you extracted in step 3.1, then `TallyEntry-main\connector\windows`.
2. Right-click **install.cmd** › **Run as administrator**. Click Yes when Windows asks.
3. If Node.js is missing, type `Y` to install it automatically.
4. Answer the three questions:

Question	What to type
Company name exactly as shown in TallyPrime	The company name from the top of Tally's Gateway screen, with the same spelling and capitals
App address	`https://tallyentry.quickentry.workers.dev`
Paste the connector key	The key from your provider. It stays hidden while you paste, which is normal. Press Enter.

5. The installer finishes with **Connector is running**.

Check it any time

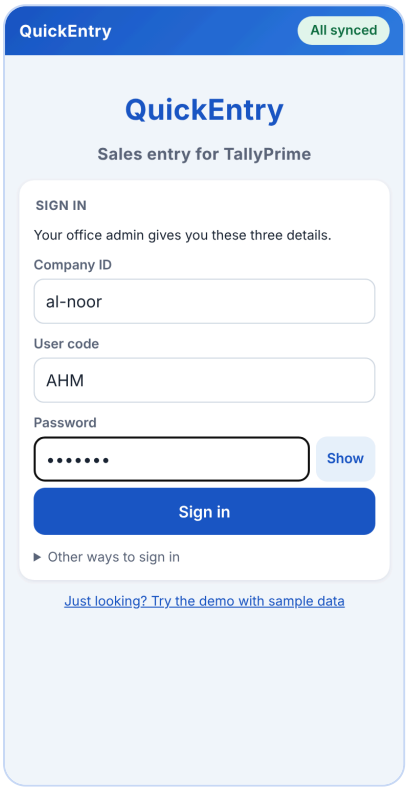

Double-click **check.cmd** in the same folder. It tests Tally and the cloud and shows *Background task: Running*, followed by the latest log lines.

> **Updating later:** download the zip again (step 3.1), extract it and run **install.cmd** again. Your key and answers are kept. Settings and the log are stored in `C:\ProgramData\QuickEntry`.

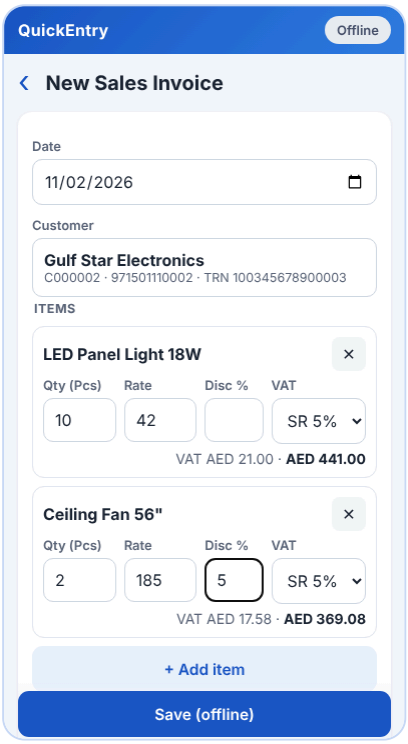

> **Keep TallyPrime open** with the company loaded during working hours. While Tally is closed, entries wait safely in the cloud and post as soon as Tally opens. Nothing is lost.

6 Your first test entry

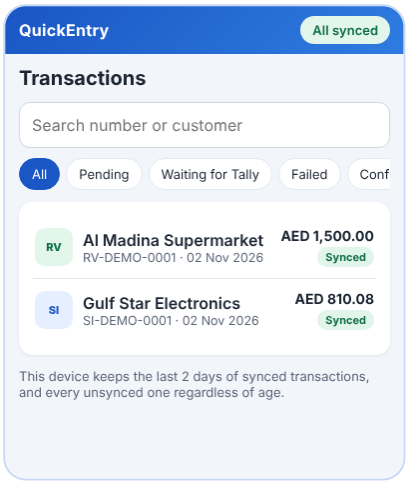

1. On a phone, open `https://tallyentry.quickentry.workers.dev`. Sign in with the **Company ID**, your **user code** and **password**.
2. On **Home**, tap **Sync now**. Within a minute, your Tally customers and items appear under **Customers**.
3. Tap **+** › **New Invoice**. Pick the customer, tap **+ Add item**, set quantity and rate, then tap **Save**.
4. Watch the status go from Pending to Waiting for Tally to Synced. This usually takes under a minute.

Sign in

New invoice

Synced

See it in Tally

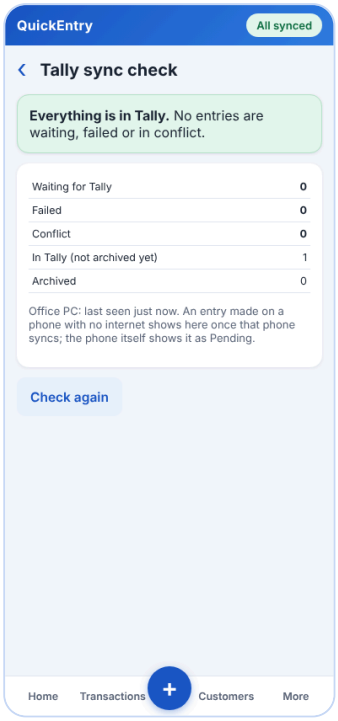

1. In TallyPrime: Alt + G Go To › **Day Book**.
2. **Day Book empty?** It only shows Tally's current date. Press F2 and type the invoice date, or press Alt + F2 and pick a period.
3. Open the voucher. Check the customer, item, quantity, rate, VAT and total.

7 Check that everything is in Tally

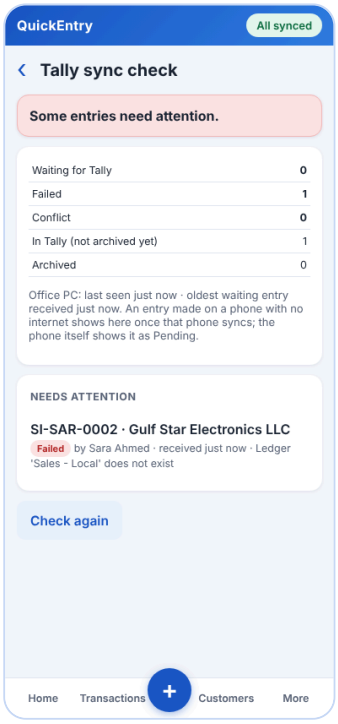

The office admin can confirm at any time that every phone entry reached Tally.

1. Sign in as the **admin** user.
2. Go to **More** › **Tally sync check**.
3. **Green, "Everything is in Tally":** you're done.
4. **Red:** the screen lists what needs attention. An entry marked Failed shows Tally's own reason, usually a ledger name that doesn't match. Fix it in Tally or in More › Tally ledger names, then edit and save the entry again.
5. "Office PC: last seen" shows when the connector last checked in. If it is more than a few minutes ago, the PC is off, offline, or the connector has stopped (see page 8).

> **Edits are safe:** when someone edits an invoice on the phone, the **same** Tally voucher is updated. A second copy is never created.

All good

Needs attention

8 If something goes wrong

What you see	What to do
"Invalid files folder" when opening Tally	A new install has no company yet. Close the message, press Alt + K › **Create** company. An empty `data` folder is normal.
Error T0008 in TDLs & Add-ons	Tally is loading an old QuickEntry.tdl. Open the path shown in the error, keep only the 3 lines from page 3, save, and restart Tally.
`localhost:9000` doesn't open	Tally is closed, or the port isn't on. Repeat step 2.1.
Customers or items don't appear on the phone	Run **check.cmd**. Make sure the company name the connector uses matches Tally exactly. Customers must be under **Sundry Debtors**. Tap **Sync now** on the phone.
Entry stuck on **Waiting for Tally**	Tally must be open with that company loaded. Check "Office PC: last seen" in Tally sync check, and run check.cmd.
Entry shows **Failed**	Open it on the phone to see Tally's reason, usually a missing ledger name (page 4). Fix it, then edit and save the entry to send it again.
Day Book looks empty	Press F2 and change the date to the invoice date.
Tally PC replaced, or key leaked	Ask your provider for a **new connector key**. Then run `install.cmd -NewKey` from a Command Prompt opened as administrator.
Phone shows **Signed out**	The admin reset the password. Sign in again. Entries already on the phone are kept.
Remove the connector	Run `C:\Program Files\QuickEntry\uninstall.cmd`. Nothing in Tally is changed.

Still stuck? Send your provider a screenshot of the error, plus the output of **check.cmd**. The log file is `C:\ProgramData\QuickEntry\connector.log` .
